The Belgian company Belintra opens a branch in Switzerland

SEMMERZAKE (BE) - AVENCHES (CH), 9 September 2014 – As part of its international expansion, Belintra NV (Belintra Inc.) opens a branch in Switzerland.

Belintra, having for many years been active on the Belgian market as well as on a number of export markets, hopes by opening a branch in Switzerland to increase its market share considerably. Belintra was already active on the Swiss market via a local partner, Medi-cart. The decision to establish its own branch gives the company the opportunity to be better attuned to the market and to maintain a larger stock in order to serve clients quicker and better.

Starting September 12th, the offices, showroom and stockrooms will be operational in Avenches. In its showroom, Belintra will be able to make available to interested health care institutions a constant selection of its product range for optimizing logistical processes in the health care sector.

The range of products includes distribution carts for medicines and health care supplies, mobile work stations that can be used on a standalone basis or linked to the distribution carts, solutions for modular internal storage, various types of carts for internal transport between different departments, and additional baskets, bins and trays. In addition, there is also a specific product range for sterilization departments and an extensive variety of items for handling linens and waste.

#

Belintra NV was founded in Belgium in 1965 and is a leading provider of safe, well-thought out logistical solutions for the health care sector. More information about the company and the products is available at www.belintra.com.
